

Architecture Steel Ringlock Scaffolding Hot dip Galvanized Q235 Steel Scaffold

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: Tianjin China
- Brand Name: Bythai
- Certification: SGS
- Model Number: BM202
- Minimum Order Quantity: 1000
- Price: 4.5-8.5
- Packaging Details: In bundles
- Delivery Time: 10-15
- Payment Terms: TT/TC

Product Specification

- Shipping Origin: China
- Surface Treatment: Hot-dip Galvanized
- Application Scenarios: Architecture
- Warranty: 2 Years
- Material: Q235 Steel
- Product Name: Ringlock System
- Highlight: **Architecture Steel Ringlock Scaffolding, Q235 Architecture Steel Ringlock Scaffolding**

Product Description

Product Description:

The Versatile Ringlock System Scaffolding is a state-of-the-art, multifaceted scaffolding solution designed to cater to a diverse range of architectural applications. Originating from Tianjin, China, this ring lock type scaffold system boasts superior construction and durability. As a product that places a premium on quality and reliability, it comes with a generous 2-year warranty, ensuring that customers can trust in its performance and longevity.

Constructed with a keen eye for detail and precision engineering, the Ringlock System Scaffolding undergoes a rigorous surface treatment process. The hot-dip galvanized finish not only provides the scaffold with a sleek, professional appearance but also serves as a protective barrier against corrosion, weather elements, and wear and tear. This process ensures that the scaffolding system can withstand the harsh conditions often encountered on construction sites, thereby extending its usable life and maintaining its structural integrity over time.

The versatility of the Versatile Ringlock Scaffold is one of its most compelling attributes. It is designed to be adaptable to various architectural scenarios, ranging from simple residential building projects to complex commercial constructions. Its flexible design allows for easy customization to fit any project's specific requirements, making it a go-to choice for contractors and construction professionals. The ring lock type scaffold system is engineered to be user-friendly, allowing for swift and secure assembly and disassembly, which saves valuable time on the job site.

Shipping straight from its origin in China, the Ringlock System Scaffolding arrives ready for immediate deployment. Its modular design means that it can be easily transported and efficiently stored when not in use. This logistical advantage reduces transportation costs and ensures that the scaffolding system is available where and when it is needed most, further enhancing the efficiency of construction operations.

Another significant advantage of the Versatile Ringlock Scaffold is its safety profile. The system is designed to meet or exceed global safety standards, providing peace of mind for both the workers using the scaffold and the project managers responsible for site safety. The robust locking mechanism at the core of the system ensures a secure connection between components, minimizing the risk of accidental dislodgement and providing a stable, reliable platform for construction activities.

Architectural projects demand scaffolding solutions that are not only strong and dependable but also easy to work with. The Versatile Ringlock Scaffold meets these needs by offering a high degree of configurability. It can be erected to various heights and dimensions, providing access to even the most challenging areas of a construction site. With its ring lock type scaffold design, users can create custom shapes and structures to provide optimal support and accessibility for a multitude of tasks, from painting and masonry to window installation and facade repairs.

In summary, the Ringlock System Scaffolding is an exemplary product that combines versatility, durability, and safety into one comprehensive package. With its hot-dip galvanized surface treatment, a generous 2-year warranty, and a design that caters to a wide range of architectural scenarios, it stands out as a superior scaffolding solution. Manufactured in Tianjin, China, this system is poised to make a significant impact on the construction industry, offering a reliable and efficient scaffolding option shipped directly to your site from its place of origin.

Technical Parameters:

Technical Parameter	Description
Surface Treatment	Hot-dip Galvanized
Warranty	2 Years
Place of Origin	Tianjin, China
Material	Q235 Steel
Application Scenarios	Architecture
Product Name	Ringlock System
Shipping Origin	China
